

Enterprise-grade AI analytics. Made easy.

Connect your data. Intelloids builds purpose-built AI analytics agents grounded in your organizational knowledge, approved data, and defined business needs.

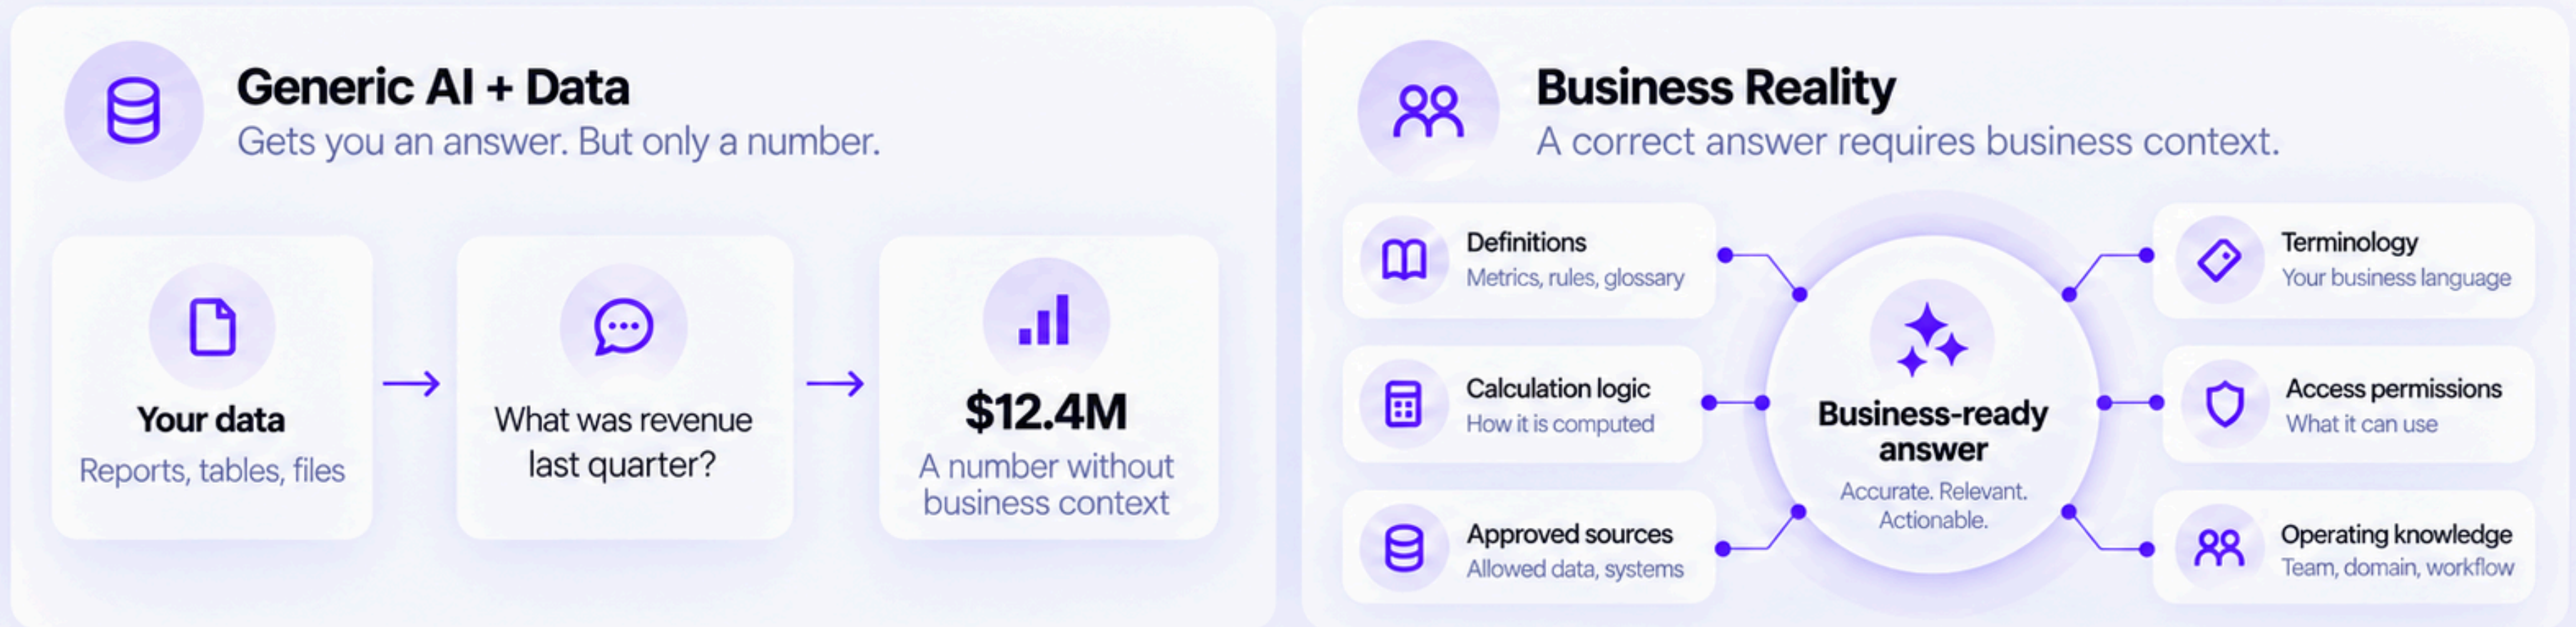

Ask in plain English. **Get answers with evidence.** Investigate further.

WHY GENERIC AI FALLS SHORT

AI needs **more than access** to your data.

It needs to know what the numbers mean, which rules apply, and what it is allowed to use.

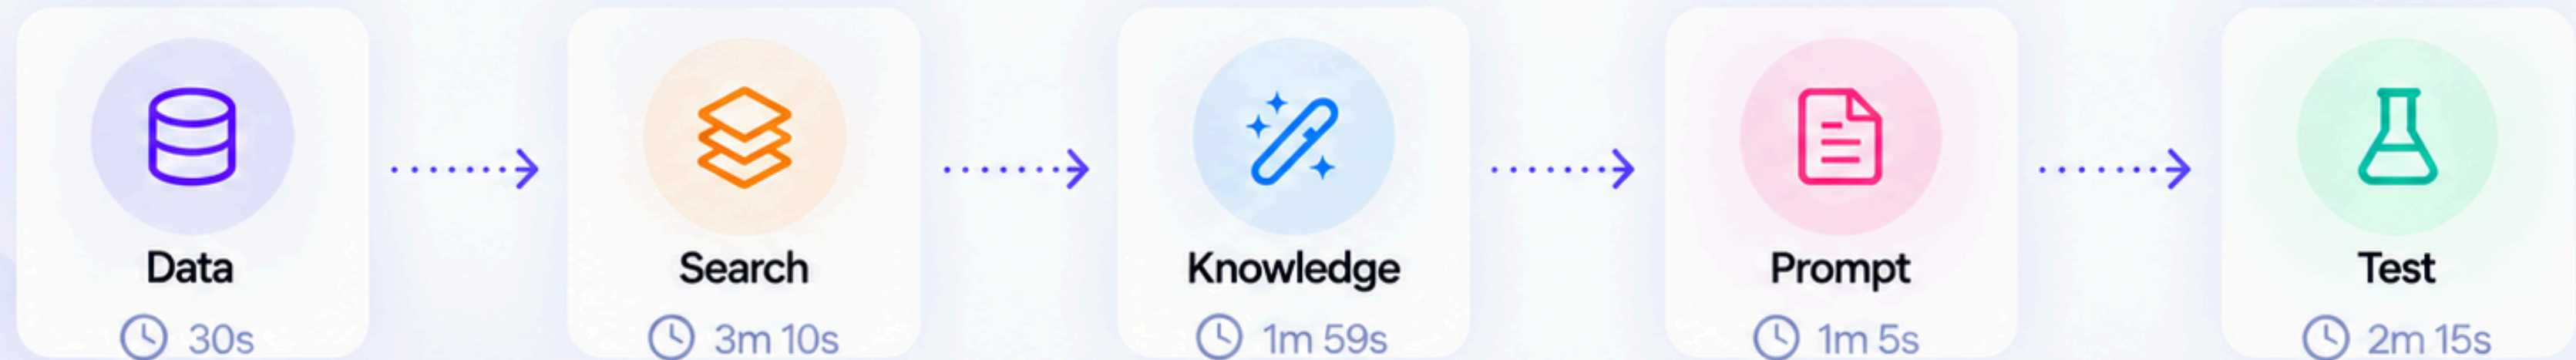

The challenge isn't getting AI to respond.

It's getting it to answer within the knowledge and boundaries your organization defines.

That is the difference between a chatbot over data and an agent built for a business job.

A governed workspace for building purpose-built AI analytics agents.

Define what an agent is designed to help with, connect the right data, and give it the organizational knowledge it needs to work effectively.

01 Define the Job

Set what the agent is designed to help with — a clear business area, purpose, or question space.

02 Connect the Right Data

Choose the information the agent can work with and keep that access under organizational control.

03 Add Organizational Knowledge

Intelloids explores the connected data and creates an initial knowledge/context layer automatically. Teams can review and edit it with their terminology, definitions, calculations, and operating knowledge.

Define

Connect

Auto-build

Review

Use

Connect your data.

Intelloids builds the foundation.

Intelloids explores the connected data, builds the initial context, and creates the agent setup automatically, while keeping everything open to review and refinement.

01

Connect

Bring in the data
the agent needs.

Connect the relevant
database or approved
source.

02

Auto-build

Intelloids creates the first
version of the agent.

- ✓ Understands the available data.
- ✓ Explores the data structure and contents.
- ✓ Builds relevant knowledge and context.
- ✓ Generates the agent configuration needed to get started.

03

Review & Deploy

Review, edit, and test
the generated setup —
then put the agent to work
with the right users.

Automated by default. **Editable when you need it.**

Typical first setup:
around 30 minutes.

One answer should lead to the next question.

Ask in plain English, see the answer and the evidence behind it, then keep investigating without starting another BI request.

01

Answer

Get a clear, accurate response from your data.

02

Understand

See the why behind the number with breakdowns and insights.

03

Investigate

Explore deeper with follow-ups, view queries, and keep the conversation going.

From number → to evidence → **to investigation.**

What was total net revenue in August 2025?

Rows: 4 | Columns: Order Status, Transaction Count, Total Net Revenue USD

11:01:54 ▼

Total net revenue (completed orders only) for August 2025 is

\$21.11M

▲ +12% vs. July 2025

In August 2025, completed orders generated \$21.11M in net revenue from 372 transactions. This is 12% higher than July 2025, driven by higher volume in core product categories.

Suggested follow-ups

Show monthly net revenue trend from Jan to Aug 2025.

What was the revenue by region?

Which product category grew the most?

Different agents for different business needs.

Create focused agents for the teams, domains, questions, and workflows that matter across your organization.

Each agent can have its own **data, knowledge, purpose, and access.**

Built around control. Free from token limits.

Keep organizational environments isolated while giving your agents unlimited token usage.

01 — Tenant Isolation

Organization A

Agents · Users · Data

Organization B

Agents · Users · Data

Organization C

Agents · Users · Data

Tenant Isolation

Each organization operates within its own isolated environment, keeping its data, agents, and access boundaries separate.

02 — Unlimited Agent Tokens

Token usage ∞

Unlimited Tokens

Agents can be used without token-based consumption limits.

Your organization controls who can access what. **Your agents can keep working without worrying about token consumption.**

More than AI sitting on top of your data.

Intelloids combines specialized agents, organizational knowledge, controlled data access, evidence-backed analysis, and governance in one workspace.

Self-service for the user. **Control for the organization.**

— GET STARTED

Bring your first business question.

Give your teams a simpler way to ask, understand, and investigate while your organization stays in control of the data, knowledge, and access behind every agent.

EXPLORE INTELLOIDS

Specialized AI agents. Governed by your organization.
Ready for the questions that come next.
